

Animal Shelter Management System

Product Description

After extensive work with top shelter managers we have come to recognize and appreciate just how much paperwork, follow-up, and effort actually goes into running an Animal Control/Animal Shelter facility. A great deal of effort has also gone into leveraging the computer's abilities to assist you in streamlining day-to-day tasks as well as the management of your shelter, with this program. This system offers a *complete* shelter management solution - from intake through adoption. The program maintains comprehensive records addressing all areas of animal care. Medical information regarding assessment, treatments, vaccinations, etc., are maintained for each animal. A whole module is dedicated solely to the monitoring and control of quarantined animals. Legal information such as licensing, the recording of dog bites, complaints lodged against owners as well as pets, any animal-related convictions, special breed registrations, and compliance with spay/neuter requirements is also accommodated. The intuitive user interface makes using the program fast and easy. You never have to traverse trees of menus to reach the section you want or find the data you need. Integration, automation, and cross-referencing is central to this software's design. For example, upon entering a new animal or "Needs Home" record, the system will try to satisfy any "Wanted Animal" requests that have been saved. Conversely, entering a "Wanted Animal" request will cause the system to automatically query the "Animal" and "Needs Home" tables for any potential matches. During the adoption process the record of the person applying for the adoption will be checked for any complaints or convictions recorded against them. This feature empowers the shelter to make an informed decision, based on documented facts, as to whether to approve the adoption or not. The management side of the program will assist you in areas such as cash receipts by automatically maintaining an audit trail that makes revenue tracking a breeze. A *real* inventory system, with complete lotting and double-entry transaction support, is also provided. A full suite of management reports not only drastically reduces your work load but helps to document the contribution your shelter makes to your community. Adding users, maintaining system tables, generating new reports, etc., is fast, easy, and left completely open and accessible to the administrative user. A host of features like our *breed tree* and *on-line breed reference* make this software truly unique.

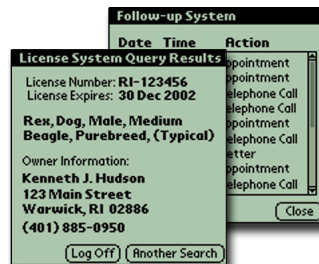

Modules

- Adoptions
 - Complaints
 - Lost Animals
 - Imaging
 - Follow-up System
 - Mapping
- Wanted Animal Requests
 - Quarantined Animals
 - Euthanasia Review
 - Vicious Dogs
 - Donations
 - Kennel Management
- Convictions File
 - Inventory
 - Cash Receipts
 - Dispatching
 - Licensing
 - Volunteers

and much more!

Partial Feature List

- Extensive integration, automation and cross-referencing.
- Cash receipt audit trail for easier money management.
- Full complement of management reports plus access to industry standard ad hoc report generator.
- **Image Acquisition** module allows you to store digital photos for "Lost" and "Found Animal" posters, web site postings, and to documenting evidence, etc.
- Full Petfinder support allows information sharing with your community and other participating facilities via the internet.

Key Benefits

- Faster** Information about your animals and the people that interact with your facility is entered once and then used to create all of your forms at the press of a key.
- Easier** Let the computer notify you of wanted/lost animal matches, remind you of follow-up tasks, and more.
- Better** State-of-the-art, easy to use, powerful, and feature rich.
